

Fellow Montanans!

People want desperately to know how they can make a difference. Our role in the coming year will be to help you to recognize the threats as they crop up in your communities, and our goal is to arm you with information, so that YOU can take ACTION. We will sound the alarm by sharing relevant news, information, and resources that you can use to make a positive impact within your sphere of influence.

One example, that most people immediately recognize, is that journalism isn't what it used to be. The mainstream media and every major paper in Montana are biased. Our sound-bite world is heavily influenced and controlled by the government as well as 'power and money hungry' individuals. Propaganda and mind controlling censoring are increasing by the day. Last Chance Patriots are working hard to provide you with links and resources tied to professionals we know and trust. You can grow your circle of influence.

One thing each citizen must do **in 2023** is eliminate the old mindset of 'That could never happen here', or 'I can't believe anything that evil is really happening'. Much evil is evident if one simply refuses to accept the media propaganda and chooses to search out the truth.

Montana is facing a massive increase in people migrating from other states. The influx of new residents fleeing 'blue states' to Montana is quite phenomenal. These folks bring their baggage and 'their politics'. They lose their naivete when their shock and awe set in, usually when winter arrives, power goes out, and 'black ice' claims its first casualty.

We Montanans need to recognize that our state is a target of the progressive assault. We must realize that drag shows, gun control, hunting restrictions, and rising crime are here NOW, and increasing due to many things, with major election fraud in every county in Montana, the main culprit, as our elections are now simply 'Selections'. We have lost our voice, until we regain our vote!

Montana has significant vulnerabilities due in part to our low household income, fueled not in small part by the tribes, as low income plays a huge role that results in people falling prey to negative influences including alcohol and drug addiction. Despite the millions of dollars that flow to, and through, Tribal governments, the reservations are home to some of Montana's poorest households. Unfortunately, 'their' Tribal money often doesn't benefit to each tribal member as intended. Montana has many strengths: our natural resources (as long as we are allowed to use them), the determined, independent, and hard-working nature of its citizens, and our relatively low population and large land area, to name a few.

United we STAND! Together we CAN fix this! Thank you for working with us in the coming year as we use laser-like focus to erect protective barriers locally to the continued assault upon Montana, America, and its precious people.
